

FLEXIBLE ASSEMBLY DEMONSTRATION AND VALIDATION LABS

FLANDERS
MAKE
DRIVING INNOVATION IN MANUFACTURING

TEST CENTRE FOR INDUSTRIAL SECURITY

Location: FlandersMake@UGent

DESCRIPTION

Our test centre for industrial security is equipped with several typical configurations of automation networks. Here we perform demonstrations and tests in a safe and controlled environment.

In addition, we developed several (mobile) demonstration units to do security vulnerability experiments in simulated environments, as running these experiments in a real manufacturing environment is not feasible. In these simulated environments we can execute specific attacks on a broad range of automation components, network configurations and industrial control systems.

The goal is to expose vulnerabilities of old and new technologies and to present an ideal platform for component suppliers to test out new components, features and patches.

FLEXIBLE ASSEMBLY DEMONSTRATION AND VALIDATION LABS

OUR OFFER

We offer our test centre for industrial security:

- To perform demonstrations and tests
- To do security vulnerability experiments
- As test platform for component suppliers to test new components, features and patches.
